DESCRIPTION:

The DX-16D/16D-SFP series is fiber optic transmission system that takes advantage of Meridian's digital encoding technology and transmits following signals:

- Sixteen Channels of RS-232 Data

System is employing the industry standard Small Form Pluggable (SFP) optical device. This SFP gives you the option for either singlemode, multimode or CWDM wavelength selections by simply plugging in the appropriate SFP module.

The versatility of this system is enhanced by its compatibility with Meridian's PC based SpectraSmart™ Network Management and Remote Diagnostic Software System. SpectraSmart™ supervises the operating parameters of the transmission system such as status on video levels, sync, carrier detect, voltage, temperature, optical levels, data present etc. See the SpectraSmart brochure for more details.

CONFIGURATIONS:

The DigiFlex™ product family is available as rack mount cards suitable for mounting in Meridian card chassis and utilizes 5 card slots. These products can easily be converted to a Standalone module with the SR-1002, Desk / Wall mount chassis (87- 264 VAC). See SR-1002 documentation for further details.
