DESCRIPTION:

The Series 100 is a Intensity Modulated (IM) state-of-the-art fiber optic video system that transmits and receives real time video signals over one multimode fiber. PAL, SECAM or NTSC formats, in B&W or color, are seamlessly transmitted distances of up to 6Km. The Series 100 is compatible with the Series 130 triple transmitter and receiver cards for high-density applications. This product requires no user adjustments & features superior quality and performance. The 100's capabilities are enhanced by it's compatibility with Meridian's PC based SpectraSmart™ Network Management and Diagnostic software system. SpectraSmart™ supervises the operating parameters of the transmission system such as status on video levels, sync, voltage, temperature, optical levels, etc., as well as external equipment which are attached to the Meridian equipment. See the SpectraSmart™ brochure for more details.

CONFIGURATIONS:

The 100 product family is available in both stand-alone modules and rack mount cards. The cards can be installed in all of Meridian's card chassis, desk chassis and 19" racking frames. This system can be configured in either star (module to rack) or trunking (rack to rack) configurations. The Series 100 is compatible with the Series 130 triple transmitter and receiver cards for high-density applications that can accommodate up to 54 transmitters or receivers per 19" chassis.
