DESCRIPTION:

The Series 400i is a Frequency Modulated (FM), fiber optic video system that transmits one video signal in one direction along with a duplex audio or data signal plus a return audio or data signal for distances of 6Km over one multimode fiber and 100Km over one singlemode fiber. PAL, SECAM or NTSC formats, in B&W or color, are seamlessly transmitted. The Series 400's capabilities are enhanced by its compatibility with Meridian's PC based SpectraSmart™ Network Management and Diagnostic software system. SpectraSmart supervises the operating parameters of the transmission system such as status on video levels, sync, FM carrier detect, voltage, temperature, optical levels, etc., and external equipment which are attached to the Meridian equipment. See the SpectraSmart™ brochure for more details.

CONFIGURATIONS:

The 400 product family is available as rack mount cards that can be installed in all of Meridian's card chassis, desk chassis and 19" racking frames. This system can be configured in either star (module to rack) or trunking (rack to rack) configurations. This product requires no user adjustments & features superior quality and performance.
