## Meridian Technologies Introduces Flexible Multi-Channel 'Up-The-Coax' Fiber Optic Transmission System

Elmont, NY April 5, 2005 – Meridian Technologies announced today its flexible, multi-channel 'up-the-coax' series of digital fiber optic video & data transmitter & receiver system as a complement to its growing line of digital fiber optic products.

Meridian's DT/DR-V system transmits high quality 10-bit video and bi-directional data signals over multimode fiber. This module is perfect for Video + PTZ CCTV applications. Based on Meridian's plug-in function cards, this system can easily be configured to transmit a variety of other signals including additional video, data and audio simply by adding the appropriate personality cards. Meridian's digital line of products is industry's most flexible. Longer transmission distances can be obtained using the singlemode version of this product.

When incorporated with Meridian's SpectraSmart diagnostic network management system, this product offers unprecedented capabilities in not only video transmission but also in continuously monitoring the integrity of each of the video signals and associated equipment for superior troubleshooting capability and technology.

### About Meridian Technologies

Meridian Technologies provides fiber optic transmission products for a variety of security, surveillance and access control applications. Established in 1990, Meridian is a recognized leader in fiber optic communications equipment and has provided equipment solutions for a wide variety of commercial, industrial, government and military customers both domestic and international.
